**Family**

Helaine Marcus Schupack, Andrew (50) (RI), Roberta (45)(MA), 3 grandchildren

**MIT Memories**

Prof. Meuller's energetic lectures in 8.01; work with Prof. Edgerton on open house exhibit of high speed flash; designing a photographic spot exposure meter for Prof. Moon, and market research for the device; dinners at Wah Yuen's [sp?] in Chinatown; trying to coordinate the myriad activities of *Technique* so the book would get published; feeling of relief when each semester finally ended; non-Western literature with Prof. Bill Greene.

**Career/Professional Activities**

53-54, Industrial Engineer, Sylvania Electric; 54-56, US Air Force;

59-99, Brown University Economics Department [industrial organization, antitrust]. About 1/2 the time was spent in administration (Department Chairman, Dean of the Graduate School, Vice-Provost);

**Reflections/Other Thoughts**

Life events are generally considered weddings, births, deaths, etc. But just as much a life event was four years at MIT. Not only did I develop experience in running things, but learned early the importance of paying close attention to the intellectual and technical basis of the operation, not just the mechanics of management. This is the essence of MIT.

84-90, Graduate Record Exam (GRE) Board (Chairman, 88-89).

**Volunteer Activities, Hobbies & Interests**

Docent, Rhode Island School of Design (RISD) Art Museum; Photography, Model Railroading; Co-author: *Tech Model Railroad Club of MIT: The First 50 Years*; Classical music; Temple Finance and Library Committees.

Retirement has led to a number of activities outside of Brown. The RISD Museum is almost like a part-time job. Last year was a year-long course in art history; this year we give tours a few times each week. The Model Railroad book and this book both take lots of time and attention. My goal eventually is to really retire and look into many things that have been put off over the years.
